Project 3 Showcase Guidelines

At the end of each batch, associates are tasked with completing a sprint on an internal Revature enterprise-level application. Each batch will get a chance to showcase their work in front of the entire company. The presentation should be around 25 to 30 minutes in order to leave room for questions at the end, depending on the size of the batch. To ensure the success of project presentations, please adhere to the following instructions:

- Dress in business professional attire
- For showcases over Zoom
  - Each presenter should have cameras ON for the duration of the presentation and Q&A session
  - All presenters should use the same professional background image
  - The showcase will be recorded and made available afterwards for both associates and clients upon request
- Each person who worked on the project should speak during the presentation
- Must have a slideshow presentation with the following:
  - Use a consistent Revature format across slides
  - Introduction to business use case of the project
  - Present the features or requirements that your team completed
  - Discuss team structure and how you divided the work
  - Discuss major technologies used in the project, design patterns, and overall architecture considerations
  - Discuss Agile / Scrum processes (if applicable)
  - Discuss git branching strategy
  - For full-stack batches, should present relevant sprint metrics, including
    - Burndown chart
    - Test coverage
    - Build statistics (total builds, build stability, etc)
    - Code quality (code smells, technical debt)
  - Discuss CI/CD process if you used a DevOps pipeline
  - Discuss outstanding defects, specifically new or critical defects introduced
  - Discuss project management techniques and tools used
  - Discuss future work to be completed

- o Discuss challenges faced during the project and how you overcame them
- Introduce yourself before speaking or have the person before introduce you
- Include a live demo
  - o Person conducting demo does not narrate, another person should assist to explain what is happening in the demo
  - o Must cover all new features implemented in the sprint, existing features are optional to demo
- For Q&A session after the presentation, allow each person on your team to answer questions
